Response to Arguments.

Applicant's arguments filed December 13, 2007 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, the indicated allowability of claims 9-14, 16-18 and 20-23 is hereby withdrawn and a new ground(s) of rejection is made in view of Iyer et al.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 9-14, 16-18 and 20-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Iyer et al. (US 2005/0254474) in view of Lynn et al. (US 2007/0192870).

1. Regarding claims 9, 11-12, 16-18, 20 and 22-23, Iyer discloses a method for containing rogue access points in a wireless network in which stations terminate connections upon receipt of deauthentication frames (para. 22; para. 70-72; para. 76). The method comprises detecting a rouge access point (paras. 30-31), identified by a wireless network address (fig. 6; paras. 47-49), selecting at least one authorized access point (para. 76), emulating the rogue access point and transmitting connection-terminating frames to terminate connections between the rogue access point and the wireless client (paras. 68-69 and 71-72; note: the AM sends a deauthentication frame on behalf of the AP). Further regarding claim 16, Iyer discloses a rogue containment device (figs. 11-12, item 120) comprising an inherent network interface (fig. 1) connected to a computer network to communicate with at least one network device (item 110) comprising a rouge containment module (fig. 11, VWMAC and RAPW-MAC; para. 66-67) to receive data characterizing a rouge access point (fig. 11, item 1200) and configuring one or more wireless network access devices to emulate the rouge access

Art Unit: 2616

point (para. 68, DENIAL_OF_SERVICE message) and send connection terminating frames (para. 69-72; note: a DEAUTHENTICATION message is sent from the AM to the STA with the SA of the AP).

- 2. However, Iyer does not disclose that the connection terminating frames are sent at a repetition interval. However, Lynn discloses that a mobile station re-authenticates when it receives a deauthentication message (para. 130; DoS Attack). Therefore, it would have been obvious to one skilled in the art at the time the invention was made to send connection terminating frames at a repetition interval in the invention of Iyer in order to block future connection attempts (Iyer, para. 69, lines 1-5; Lynn, para. 130, DoS Attack).
- 3. Regarding claims 13 and 21, Iyer does not disclose transmitting disassociation frames.

 However, Lynn discloses transmitting disassociation frames (para. 130, DoS Attack). Therefore, it would have been obvious to one skilled in the art at the time the invention was made to transmit disassociation frames in the invention of Iyer in order to terminate connections (Lynn, para. 130, Dos Attack).
- 4. Regarding claims 10 and 14, Iyer discloses that the source of the connection terminating frame is the rogue access point (para. 72; para. 70).

Allowable Subject Matter

Claims 5-8, 15, 24 and 26-34 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Harper whose telephone number is 571-272-3166. The examiner can normally be reached weekdays from 11:00 AM to 7:00 PM ET.

10/611,660

Art Unit: 2616

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lynn Feild, can be reached at 571-272-2092. The centralized fax number for the Patent Office is 571-273-8300. For non-official communications, the examiner's personal fax number is 571-273-3166 and the examiner's e-mail address is kevin.harper@uspto.gov.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications associated with a customer number is available through Private PAIR only. For more information about the PAIR system, see portal uspto gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
